CITY COUNCIL MEETING STAFF REPORT

Date April 27, 2010

Agenda Item:

Subject: City of Wheatland Sewer System Management Plan (SSMP)

Prepared by: Larry L. Panteloglou Sr. / Dane Schilling

Approved: _____
Stephen L. Wright,
City Manager

Recommendation: Adopt the attached Resolution approving the City of Wheatland Sewer System Management Plan (SSMP) in accordance with State Water Resources Control Board Order No. 2006-0003-DWQ

Discussion: On May 2, 2006, the State Water Resources Control Board (SWRCB) issued an Order for Statewide General Waste Discharge Requirements (GWDRs) for sanitary sewer systems statewide. This Order is designed to facilitate consistent and comprehensive regulation of publicly owned sanitary sewer systems throughout the State in an attempt to quantify and reduce Sanitary Sewer Overflows (SSOs). In January 2008 the Council adopted the proposed plan concept and schedule for the development of the City's SSMP. Attached is a copy of the staff report that was considered at that time.

A final draft of the City of Wheatland SSMP, Sewer System Management Plan (SSMP) and the previously adopted development plan are now available at the City Clerks office for City Council and public review. Attached is a copy of the table of contents and an executive summary of the plan. The document is approximately 200+ pages. A copy of the entire plan will also be available for review at the Council meeting.

Alternatives: None - this document was produced in conformance with State requirements and must be adopted by May 2, 2010. However, the SSMP is intended to be a "living" document and may be revised by the Council at any time.

Fiscal Impact: Unknown at this time. The SSMP identifies certain system deficiencies (particularly at some lift stations) that will require capital improvements be made. Proposed SSMP related capital improvement will be brought to Council at a later time. There may

also be some ongoing increased maintenance costs due to this State mandated program. These costs, once implemented, may necessitate sewer rate adjustments in the future.
